

businessControl

Specialized industry software for the operation of vending machines on the basis of SAP Business One

BUSINESS™
SAP
PARTNER

BusinessControl is a comprehensive and cost-effective business software for the operators of vending machines. It combines the advantages of a mature ERP software for small and medium sized enterprises with the specific requirements of the vending industry. The system was developed in close cooperation with vendingControl, our partner for the vending industry, and with the SAP AG, the leading provider of business software.

BusinessControl extends the functionality of SAP Business One, a high-grade future-proof solution for small and medium sized businesses. BusinessControl provides a wide range of features which are custom made for the needs of the vending industry. Out of one system you can control all aspects of your business: from vending machine administration to route planning to purchase and sale up to accounting and reporting.

BusinessControl is coherent and concise at a competitive price. The software is suitable for small as well as big enterprises. A specialty of businessControl is the possibility of remote query of vending machines via vendingRadio, a telemetry module for data transmission via GSM/GPRS by the company vendingControl. With this technique, the operator can retrieve the current goods and monetary stock information in the individual vending machines anytime, and process them within the system. This optimal control of all business and maintenance processes enables cost reductions.

Features

Based on SAP Business One and enhanced with branch-specific features, this software system enables the complete corporate management through one ERP (Enterprise Resource Planning) system.

BusinessControl offers the following specific features:

■ Vending machine administration

- Technical components and vending machine configuration
